

importing files in the preamble

Guide version 1

2020-03-02 22:21:22 -0500

Input commands from external tex file

knitr can't process newcommands with arguments properly,
they must be defined in an external tex file and then imported.

new command within Rmd file

and seven years ago

new command from imported tex file

This should plot a logo in the southeast corner of the slide.
